BUSINESS VALUE

UNIFIED AUTHENTICATION

PointSharp ID includes all authentication options an enterprise organization needs.

EASY DEPLOYMENT

Getting started with PointSharp ID is easy. End-user friendly and smart integration ensures ease of deployment.

MICROSOFT

PointSharp ID is the authentication product for your Microsoft environment. Certified by Microsoft and built on .NET technology.

Secure login

with One-Time Password

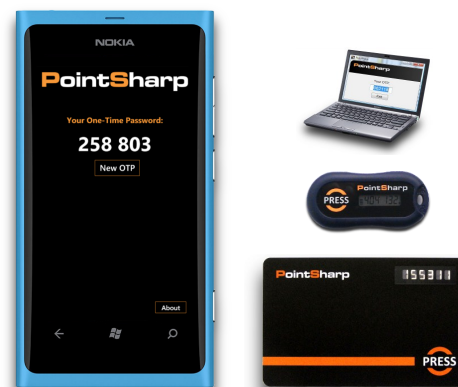

One-Time Password it is easy to secure access to the organization with strong authentication. One-Time Password works on all devices and assures that only trusted persons get access. PointSharp ID includes everything an enterprise company need.

Executive summary

Avoiding static password is key to protect company information from unauthorized access. Static passwords are today the majority reason behind company security breaches. One-Time Password is the easy way to secure access to company information. One-Time Password is device independent

which is mandatory today when user access information from different devices, e.g. Smartphones, Tablets and PCs.

- No static passwords.
- OTP is device independent.
- Avoid costly security breaches.

Choice of authentication

Unified authentication with PointSharp ID makes it easy to always choose the best authentication option for any user scenario. One product with everything needed included.

Mobile phone

People always have their mobile phone with them. This makes the mobile phone excellent to use in the authentication process. The mobile phone is a personal device and missed instantly if lost which is an important security factor.

SMS One-Time Password is sent to the mobile phone. Perfect for external users as no software has to be installed.

Mobile Token, software distributed over the air. Converts your mobile phone to a hardware token that's always with you.

Hardware token

Proven technology offering strong authentication. The standard OATH has revolutionized the market, lowered price and supplier

- **Key Chain Token**, small form factor token generating OTPs.
- **Credit Card Token**, credit card sized (OATH) token always available in the wallet to generate OTPs. Includes RFID to be used for physical access.

Scratch card

Credit card sized token with pre-printed OTPs is easy deployed to a large volume of customers and partners. Easily branded and can also be distributed in digitally form.

Desktop token

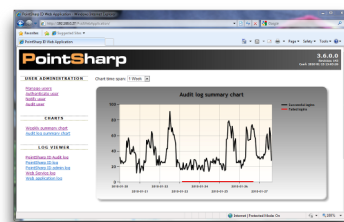

Using the PC as a token is also an authentication option. Enabling easy and cost effective deployment to large volume of users.

Enterprise administration

PointSharp ID offers easy administration both for deployment and daily operations. Integration with Active Directory ensures minimum administration. It is also easy to integrate with helpdesk and self-service portal for specific administration tasks.

- Web
- Windows GUI
- Web services
- SDK

Policy based authentication

Investing in new authentication technology usually means replacing an older solution. PointSharp ID offers an easy transition with the feature SmartAuth, enabling all authentication options as well as the old solution to be controlled by PointSharp ID.

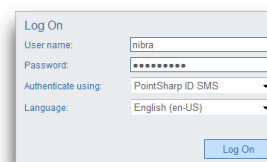

Mobile application access

PointSharp ID supports access from mobile devices from applications such as SharePoint, ActiveSync etc. The access is protected with an One-Time Password that can be valid a full working day or week.

Microsoft environment

PointSharp ID™ is the choice of authentication product in a Microsoft environment with integration to many Microsoft products. Supporting industry standards also enables support for all major access products on the market.
